Source: [IEEE Electronic Library Online](#)

[Show Abstract](#)

This paper is to study the effects of TDI on mice marrow cells . The effects of TDI were studied by laser scanning confocal microscope to investigate morphologic changing of the mice bone marrow cell and genotoxicity test -chromosomal aberration test and sister chromatic exchange (SCE) test. Results showed that the 1/16LC₅₀ and 1/8LC₅₀ dosage of TDI had no significant effects on the fluorescence pixels rate of RNA/DNA, the chromosome aberration rate and the frequencies of sister chromatic exchange of the mice (P>0.05), but both 1/4 LC₅₀ and 1/2 LC₅₀ dosage had significant effects on the fluorescence pixels of RNA/DNA, and the chromosome aberration rate and the frequencies of sister chromatic exchange of the mice (P<0.01). TDI has the genetic toxicity.
